# Iemand om op staat te maak

God het vir ons elkeen gawes gegee om 'n verskil te maak in ander se lewe. Sommige in een of twee mense se lewens. Ander weer om 'n verskil in baie mense se lewens te maak.

Petrus was 'n visserman en die kenners is onseker of hy kon skryf, maar as jong Joodjie moes hy heel waarskynlik die Torah uit sy kop leer. Maar maak nie saak nie, hy het iemand gehad wat hom gehelp het met sy skrywery. **<sup>12</sup>Silvanus het my gehelp om hierdie kort briefie aan julle te skryf. Hy is 'n mede-Christen op wie 'n mens kan staatmaak.**

En skryf was sy gawe. Ek vermoed dis myne ook. En weet jy hoeveel plesier gee dit my as ek iets geskryf het en dit beteken vir iemand anders iets. As ek met my talent 'n verskil kan maak in ander se lewens, spring ek heeldyd oor die maan.

'n Vriend van my se pa het sy twee broers na graad 10 uit die skool gehaal om te kom help met die *planthire*. Toe my vriend klaar is met graad 10, beveel die hoof aan dat hy toegelaat moet word om graad 12 klaar te maak, want, sê die hoof: "Die enetjie het baie potensiaal."

Aan die einde van graad 11 kon sy pa dit nie meer hou nie en haal hom toe ook uit die skool. Kort daarna stap hy sy pad om sy papiere as *mechanic* te gaan haal.

Dit was daar vanuit die *workshop* waar hy die regte finansiële vroeë begin vra het, soveel so dat die ouditeure vir sy pa gesê het hy moet eerder in die kantoor gaan werk. Dit was nie lank nie, toe slaan hy die groot maatskappy se *till*.

So skuur hy skouers met groot slimkopmanne in groot mynbesighede waar tot meer as 200 van hulle besigheid se mynvoertuie daagliks mynstof rondkarwy en deursoek word vir nog goud.

Wanneer hy die nuwe jaarlikse verhogings op die tafel sit, wat die grootkoppe se oë nog groter laat rek, stel hy rustig voor hulle moet dan eerder weer 'n tender uitsit. Die keer doen 28 manne aansoek om die kontrak oor te vat.

En as die (myn-) stof gaan lê, is dit weereens hy en sy broer wat deur die slimkoppe na die raadsaal geroep word. En al is sy verhoging nou nog 'n paar persent meer as waarmee hulle begin het, loop sy lorries weer rustig tussen die mynhoop. Ek vermoed dis omdat hy 'n man is op wie mens kan staatmaak.

Jy sien, dis sy gawe. Sy kwalifikasie is heel anders as die manne wat die somme maak. Hy weet waar die Here hom geplaas het en watter *tools* aan hom uitgedeel is en hy gebruik dit. Dan besef hy ook dat God hom aan die hoof geplaas het om 'n verskil te maak in ander se lewens.

Sy personeel ervaar dit aan hul lywe. Wanneer die swaar hulle tref, weet hulle aan watter deur hulle kan gaan aanklop. Selfs mense buite sy organisasie ervaar sy goedheid terwyl hy in hulle lewens inploeg.

Sylvanis het sy skryftalent gebruik om 'n verskil te maak in baie mense se lewens. *My mechanic*-tjommie met sy graad 11-kwalifikasie agter sy naam gebruik sy gawes om 'n verskil in baie mense se lewens te maak. Jy kan op hom staatmaak.

En weet jy wat? So het God ook vir jou 'n klompie gawes gegee om 'n verskil te maak. Kan mense op jou staatmaak?

## Teks

### 1 Petrus 5:12-14

## Om oor na te dink

- Hoe lyk jou gawes?
- Gebruik jy dit?
- Kan ander op jou staatmaak?

## Gebed

Vader, dankie vir my gawes. Heilige Gees, help my om dit elke dag te gebruik, sodat ander op my kan staatmaak. Ek vra dit in Jesus se Naam. Amen

# Hoopstad Afrikanerbeeswêreld

**Dis 'n welbekende feit dat Afrikanerbeeste tydens die Groot Trek van onskatbare waarde was. Die beeste het met hulle trotse horings die ossewaens noordwaarts getrek en is ook gebruik vir hulle vleis en melk.**

Na die Groot Trek, het Voortrekkers uit die Winburglaer verkenningsekspedisies weswaarts uitgestuur om goeie weiding te soek. Hulle het die welige vleie langs die Vetrivier ontdek. So het beesboere soos die du Plessis, van Biljons, De Wette, Theunissens, Erasmusse, Kotzé's, Cronjé's, Pieterses en Rasse onder andere, hulleself by uitstek as beesboere in die gebied gevestig. Afrikanerbeeste het dus 'n groot rol gespeel in die ontwikkeling van Hoopstad.

Hulle het vlytig en met unieke kennis, 'n uitsonderlike liefde en 'n oog vir Afrikanerbeeste, die diere met streng seleksie vir vleisgehalte, produksie, gehardheid, bouvorm en 'n hoë kwaliteit suiwer geteel. So het Hoopstad bekend geword as die bakermat van die Afrikaners. Na die Anglo-Boere oorlog het die boere met uiterste pogings daarin geslaag om met die beeste wat oorgebly het en wat hulle bymekaar kon kry, weer

aan te gaan. Hierin was die rol van die telerpatriarg, Rooi Jozeph du Plessis, baie waardevol. Die Afrikanerbeeste is aanvaar as die ideale beesras vir die land se ekstensiewe boerdery toestande.

Na die stigting van die Afrikanerbeestelersgenootskap in 1912 te Potchefstroom, wou Afrikanerbeesboere hulle kuddes verbeter met die aankoop van stoetbulle. Daar is besluit om jaarliks by Hoopstad, 'n Afrikanerbulveiling te hou. Die eerste veiling is in 1939 gehou. Die Hoopstad Afrikanerbultelersvereniging se veiling is dus die oudtse stoetvee veiling in Suid-Afrika en word vanjaar met trots vir die 85ste agtereenvolgende keer aangebied.

Metertyd is talle ander sintetiese rasse, met Afrikaner gene as aandeel, geteel. Boere het ook allerlei gewasse verder van die Vetrivier vleilande verbou en die dorp het in 'n gevestigde boeregemeenskap ontwikkel.

Vandag is Hoopstad steeds bekend vir sy Afrikanerbeeste. Met die liefde wat die nageslag vir hulle het, sal die Afrikaners steeds in die toekoms hulle plek sal kan volstaan.

“Die meetsnoere het vir my in lieflike plekke geval. Ja, my erfenis is vir my mooi.”

**Alet Ras**

## Afrikanerbeesskof

Indien jy 'n koningsmaal wil voorsit, besprinkel ongeveer 3kg Afrikanerbeesskof alkante met sout en peper. Plaas in aliminiumfoelie, met die blink kant na binne gedraai. Geur met origanum en lourierblare. Plaas uieringe onder op foelie, die skof daarop en weer uieringe bo-op. Verseël die foelie deeglik en plaas in 'n toe oondpan. Stel die oond op 160°C, sodat die vleis stadig gaar word en nie krimp nie. Sodra die vleis gaar is, laat afkoel. Sny in dun skywe en maak 'n sous van die vleisaftreksel en soppoeier. Gooi die sous oor die vleisskywe. Die gereg vries goed. Wanneer jy dit wil voorsit, ontvries, maak deeglik warm en geniet dit. Jy kan die vleis ook koud bedien, met tuisgemaakte soet mosterd.

# The dawn of a new Era in Auctioneering

**Are you tired of relying on old bulls that no longer meet your expectations?**

**It's time for a change!**

At Central Saleyard, we offer you the opportunity to experience a new generation of bulls that are not only faster and more consistent but also brimming with energy. Our bulls are the perfect addition to your Sale.

Danie Strauss, a trusted name in the industry, is your go-to expert at Central Saleyard. With years of experience, Danie is a mastermind as an independent auctioneer.

Central Saleyard, we pride ourselves on offering only the best, and our new generation bulls are no exception. They are ready to run, ready to work, and ready to make a difference at your next sale.

So, why wait? Make the switch to one of the new generation bulls and see the difference for yourself.

For more information or to schedule a booking, contact Danie Strauss at [072 585 4028](tel:0725854028).

**Experience the future of independent auctioneering with Central Saleyard!**

Dear Valued Buyers,

I would like to extend my sincere gratitude to all our buyers for their invaluable support during our recent production sale in Frankfort. Your presence and participation made the event a great success, and we are truly grateful for your continued support.

I would also like to express my appreciation to BKB for their exceptional work both before and during the auction. Their professionalism and dedication contributed significantly to the smooth running of the event, and we are thankful for their partnership.

Furthermore, I would like to offer my heartfelt congratulations to Danie Strauss of the Central Sale Yard for his exceptional manner and skill in handling the auction as an auctioneer. His expertise and professionalism were truly commendable, and we are grateful for his contribution to the success of the sale.

Once again, thank you all for your support, dedication, and commitment to our business. We truly value our partnership with each and every one of you and look forward to continuing our successful collaboration in the future.

Warm regards,  
Andrew Jordaan en Seuns

[4] Daar is 'n verskeidenheid van genadegawes, maar dit is dieselfde Gees wat dit gee;

[7] Aan elkeen afsonderlik word 'n werking van die Gees gegee tot voordeel van almal.

## 1 korintiërs 12:4-7

# Wes-Kaap gereed om bek-en- klouseer hok te slaan

(Foto: William WEST / AFP)

**Die werkgroep wat bek-en-klouseer in die Wes-Kaap monitor het vandeeweek weer vergader en nuwe bekommernisse is op dié vergadering geopper.**

Maroela Media het vroeër berig die Kouga-munisipaliteit in die Oos-Kaap het 'n ekonomiese ramptoestand verklaar weens bek-en-klouseergevalle in die gebied wat drasties toeneem.

“By die Agri Wes-Kaap-kongres het John Steenhuisen, minister van landbou, en Ivan Meyer, Wes-Kaapse LUR vir landbou, ekonomiese ontwikkeling en toerisme, na die belangrikheid van bio-sekuriteit verwys,” het Jaco van den Berg, voorsitter van die werkgroep, gesê.

“Ons kry ook gereeld nog navrae van produsente oor hoe hulle hul bio-sekuriteit kan opskerp.

“Bio-sekuriteit op plase is elke produsent se eie verantwoordelikheid.”

Van den Berg sê in Julie was daar 74 voertuie by die Beaufort-Wes-weegbrug wat vee vervoer het en in Augustus was daar 64.

“Die Swellendam-weegbrug is ook 'n besige weegbrug vir die vervoer van vee met 46 in Julie en 58 in Augustus.

“Die departement van vervoer is besig om te bepaal waar die meeste diere in die provinsie vervoer word.”

Van den Berg sê daar is geen oortredings in die vervoer van vee opgemerk nie, wat op die samewerking van vervoerkontraakteurs dui.

“Met die nasionale jeugskoukampioenskap in Mpumalanga wat om die draai is, het die Wes-Kaapse landbou-jeugvereniging, die grootste in die land, die veilige en verantwoordelike keuse geneem om hom te onttrek.

“Ons hou vol met die bewusmaking van watter stappe gevolg moet word asook watter dokumentasie beskikbaar moet wees vir die vervoer en slag van diere.

“Ons sal seker maak dat die provinsie gereed is indien die siekte ons provinsie binnekom,” sê Van den Berg.

# National Wool Market Report

**The 2nd sale of the 2024/25 wool season took place today, with a smaller offering of 5 454 bales, after 400 bales were withdrawn prior to the sale.**

Less than 50% of the offering consisted of long length wools, with sustainably certified wools comprising 56,7% of the merino wools offered.

The strong SA currency, coupled with a struggling Australian market, continued to exercise downward pressure on today's sale.

Some good after sales assisted in reaching an overall sales clearance of 91,6% on today's sale.

The all-merino indicator decreased by 2% to close on R159,30 p/kg, whilst the certified indicator also eased by 2% to close on R160,71 p/kg.

A highest price of R235,02 (clean) was achieved for a single bale of 16,1 micron merino fleece wool.

The Australian market fell by 2,3% (AU\$) this week, compared to their previous sale held on Wednesday, 21 August.

The major buyers on today's sale were BKB Pinnacle Fibres (1 131), Standard Wool SA (1 108), Tianyu SA (711) and G Modiano SA (655).

The next sale will take place on 4 September 2024 where approximately 6 199 bales will be on offer.

#### Upcoming sales dates

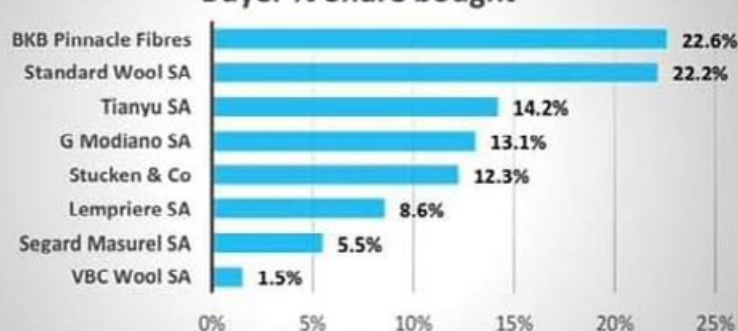

Cat	Scale Close	Sale Date	Payment
6	04 Sep 24	02 Oct 24	09 Oct 24
8	18 Sep 24	16 Oct 24	23 Oct 24
10	02 Oct 24	30 Oct 24	06 Nov 24
12	16 Oct 24	13 Nov 24	20 Nov 24

Less than 50% of the offering consisted of long length wools, with sustainably certified wools comprising 56,7% of the merino wools offered. The strong SA currency, coupled with a struggling Australian market, continued to exercise downward pressure on today's sale. Some good after sales assisted in reaching an overall sales clearance of 91,7% on today's sale. The next sale will take place on 4 September 2024 where approximately 6 199 bales will be on offer.

# Wat behels die gevreesde perdesiekte?

*JAN DU PREEZ, besturende direkteur, Instituut vir Suiweltegnologie*

**Etlike duisende perde het al in Suid-Afrika en Afrika gevrek weens die gevreesde perdesiekte. Die enting van perde met Onderstepoort se perdesiekte-entstof is die belangrikste voorkomingsmaatreël teen die siekte. Onderstepoort kan die immuunstatus van perde teen perdesiekte bepaal.**

Perdesiekte is 'n erge (perakute) tot matige infeksiesiekte van die perdefamilie, wat nie aansteeklik is nie. Dit word veroorsaak deur 'n virus (orbivirus). Daar is nege verskillende virusstamme (serotipes) wat perdesiekte veroorsaak.

In 1944 het Onderstepoort se Veeartsenykunde-instituut bewys dat die oordrag (vektor) van perdesiekte en bloutongvirusse deur klein, bloedsuiende muggies gedoen word. Perde is baie vatbaar vir perdesiekte en vrektes van tot 95% kan voorkom by ongeënte perde.

Donkies en muile is meer weerstandbiedend teen perdesiekte en die siekte se verloop by hulle is

gewoonlik matiger. Perdesiekte kom gereeld in die meeste lande suid van die Sahara in Afrika voor. Honde wat besmette vleis eet van perde wat aan perdesiekte gevrek het, kan siek word en vrek. Honde speel egter blykbaar nie 'n rol in die verspreiding van perdesiekte nie.

## Hoe kry perde die siekte?

Die virus word na die perd oorgedra deur klein, bloedsuiende muggies (ook genoem brandassies) met die naam *Culicoides* spp. Die belangrikste spesie is *C. imicola*. Die siekte kom hoofsaaklik in die laatsomer en herfs voor wanneer muggies volop is. Warm, vogtige klimaatstoestande begunstig die uitbroei van die insekte, wat skemeraande en snags aktief is en in groot getalle in laagliggende dele in vleie en rondom panne en damme waargeneem word.

Gedurende die winter, vernameelik in gebiede waar strawwe koue en ryp voorkom, verdwyn die muggies en gevolglik kom gevalle van perdesiekte nie voor nie, totdat klimaatstoestande wat dit begunstig, die volgende somer weer intree.

Perde moet laatmiddag, snags en vroeg soggens op stal gehou word. Die *Culicoides* muggies is nagtelike insekte en is nie geneig om geboue binne te gaan nie.

- ▲ 1: Die muggie *Culicoides imicola* dra die perdesiektevirus na perde oor.
- ▲ 2: 'n Perd met dikkopperdesiekte: Daar is swelsels bokant die oë.
- ▲ 3: Dié perd, wat dikkopperdesiekte het, se ooglede is geswel.
- ▲ 4: Hierdie perd is dood aan dikkopperdesiekte. Daar is baie skuim by sy neusgate.
- ▲ 5: Sebras kry subkliniese (niesigbare) perdesiektebesmetting en kan dus as bron van besmetting dien. Sebras vrek egter nie van perdesiekte nie.
- ▲ 6: Perde moet jaarliks teen perdesiekte ingeënt word.

## Siektetekens

Perdesiekte kom in vier verskillende vorms voor, naamlik: Perde siektekoors, dunkopperdesiekte, dikkopperdesiekte of 'n kombinasie van die twee vorms. Perdesiektekoors is 'n matige vorm van die siekte en word gekenmerk deur 'n koors wat vir een tot ses dae duur.

Hierdie perde se weerstand verlaag en hulle is meer vatbaar vir 'n opvlamming (terugval)

van galkoors. So 'n toestand kan foutiewelik gediagnoseer word as 'n terugval van perdesiekte tydens die hersteltydperk gedurende perdesiekte.

Dunkopperdesiekte tas hoofsaaklik die longe aan en word gekenmerk deur hoë koors, moeilike asemhaling, skuim uit die neusgate en 'n kort verloop met dood as gevolg van versmoring. By die dikkopvorm is onderhuidse swelsels, veral bokant die oë, die ooglede, die lippe, tussen die onderkaak en die onderdeel van die nek, bors en pens kenmerkend. Die dood tree gewoonlik in as gevolg van hartversaking. Die gemengde (kombinasie) vorm van perdesiekte, het siektetekens van beide die dunkop- en dikkopperdesiekte.

## Nege verskillende virustipes

Daar is nege bekende tipes perdesiektevirusse in die natuur. Hierdie virustipes is immunologies verskillend en beskerm nie onderling teen mekaar nie. Dit beteken dat perde telkemale perdesiekte kan opdoen en ten spyte van die gebruik van polivalente entstof, is doeltreffende immunisering nie altyd moontlik nie.

## Gevriesdroogde perdesiekte-entstof

Onderstepoort se perdesiekte-entstof word as twee aparte inspuitings met verskillende perdesiekte-virustipes aangebied. Dien eers kombinasie I toe en minstens drie weke later kombinasie II. Beskerming van die ingeënte perde teen perdesiekte word verkry drie tot vier weke ná die volledige inenting. Perde moet verkieslik jaarliks gedurende die lente of vroeë somer teen perdesiekte ingeënt word.

## Uitwerking van die entstof

Diere wat vir die eerste keer ingeënt word, kan moontlik 'n effense reaksie toon tussen die sewende en veertiende dag. Vir hierdie tydperk en 'n week daarna moet sulke diere nie harde werk doen nie. Perde wat voorheen teen perdesiekte ingeënt was, sal waarskynlik nie tekens ná inenting wys nie. Sulke perde kan normale werk verrig ná inenting, maar moenie oorwerk word nie. Perde wat traagheid ná inenting wys, moet onder geen omstandighede geforseer of gedryf word nie. Perde is redelik goed beskerm teen perdesiekte drie tot vier weke ná inenting. Omdat die perdesiekte-entstof beskerming gee teen verskeie perdesiekte-

virustipes is die spektrum van immuniteit, veral in jong perde, ná 'n enkele inenting (kombinasie I en II) nie altyd voldoende om die perd teen perdesiekte te beskerm nie.

## Waarskuwing

Sommige jong vullens, wat vir die eerste keer geïmmuniseer word, kan dalk hewig reageer. Moenie die dier binne sewe dae ná inenting slag vir menslike gebruik nie.

## Verpakking

Die entstof word in twee aparte botteltjies aangebied wat vir 'n enkele inenting van 'n perd is. Dragtige merries moet verkieslik nie in die eerste drie maande van dragtigheid ingeënt word nie. Inenting in die laat stadium van dragtigheid is veilig en word algemeen aanbeveel omdat dit 'n goeie passiewe biesmelk-immuniteit in die vul tot gevolg het.

## Sebra is 'n draer

Onderstepoort se Veeartsenykunde-instituut het onlangs bewys dat die sebra 'n draer is van die perdesiekte-virus.

## Gebruiksaanwysings van perdesiekteentstof

Die aktiewe bestanddeel van die entstof is in die vorm van 'n poeier of klont in 'n klein botteltjie. Koppel een van die ingeslote naalde aan een van die spuite met verdunningsvloeistof en spuit die inhoud in botteltjie nommer 1. Skud die botteltjie tot die inhoud opgelos is en onttrek weer met die spuit. Die entstof is nou gereed vir gebruik en moet dadelik ingespuut word.

Vermý blootstelling aan hoë temperature en direkte sonlig gedurende inenting. Bewaar die res van die verpakking by 4°C tot 8°C vir toediening minstens drie weke later. 'n Skraagdosies-entstof teen perdesiekte word jaarliks aanbeveel.

## Dosis

Die dosis entstof wat toegedien moet word, is 2 ml onderhuids ongeag die ouderdom of massa van die perd.

## Voorkoming en beheer van perdesiekte

- Perde moet jaarliks ingeënt word. Die entstof sal nie noodwendig volledige immuniteit

(beskerming) in alle perde teweegbring nie en dit is noodsaaklik om ook ander bykomstige maatreëls te neem om perde teen perdesiekte te beskerm gedurende die tyd van die jaar wanneer die risiko van oordraging van besmetting deur die bytende Culicoides muggie die hoogste is.

- Perde moet weggehou word van laagliggende dele van die plaas, soos vleie, naby riviere, damme en panne omdat die bytende muggies wat perdesiekte oordra, daar baie aktief is.
- Perde moet laatmiddag, snags en vroeg soggens op stal gehou word. Die Culicoides muggies is nagtelike insekte en is nie geneig om geboue binne te gaan nie.
- Die aanwend van insekweerders en die gebruik van insekdoders op die huid van die perd sal die Culicoides muggies ontmoedig om op die perd te voed (bloedmaal te neem) en so die perd met virusse te besmet.
- Moenie sebras wat as 'n bron van besmetting (reservoir) van perdesiekte-virus kan dien naby perde aanhou nie.
- Teel liefs net met ingeënte merries sodat verseker kan word dat die vul 'n goeie immuniteit deur die kolostrum (biesmelk) van die merrie kry om hom die eerste ses maande van sy lewe te beskerm. Vullens moet verkieslik twee keer gedurende hulle eerste en tweede lewensjaar ingeënt word en daarna net een keer jaarliks.
- Die teelseisoen moet liefs so gereël word dat die vullens nie die ouderdom van ses maande bereik gedurende die tyd (somermaande) wanneer die muggies aktief is nie. Op ses maande moet die vullens van ingeënte merries die eerste keer ingeënt word, want dan beskerm die immuniteit van die merries nie meer die vullens nie.
- Hou perde indien moontlik in perdesiekte-vrye areas aan.
- Raadpleeg die veearts vir verdere inligting aangaande immunisering en voorkomingsmaatreëls teen perdesiekte.

# Colostrum Management

## Makes the Difference: For More Piglets and For Better Piglets

**The importance of colostrum for the health of piglets is unquestioned. Colostrum provides energy and hydration to maintain vital bodily functions. It also provides protection against pathogens through local immunity (digestive) and systemic immunity. Pre-weaning mortality (PWM) continues to be one of the main challenges for the producer's financial bottom line. Research shows that an amount of 200 cc of colostrum on day one increases survivability of piglets born in the 2 to 2.5-pound range (0.9 to 1.1 kilo) by 4 to 5 times (Ferrari et al (2014)).**

One of the challenges is how to increase the number of piglets that get enough colostrum to thrive when born in large litters and/or for piglets born lighter than their littermates. "Different types of colostrum management are available to assure proper colostrum intake," says Mauricio Gonzalez, Technical Services Manager at PIC. "Producers should proactively consider what kind of colostrum management they are capable to implement consistently over time."

### 1. Split-suckling

Split-suckling is the best method in terms of implementation and manpower needs. For split-suckling, a large litter is divided into two halves after farrowing is completed. Groups are separated for 90 minutes, and the smaller piglets are able to nurse with little competition. Split-suckling is commonly used for large litters, with more piglets than functional/milking teats. It is also useful for litters with uneven birth weights where the small-medium piglets are under a clear disadvantage to find a teat and to keep it when having competition.

### Some tips:

- Move off the first/largest 5 to 7 piglets born to let the smaller ones nurse without competition
- As stated previously, not 100% of the litters born will require this support
- Wait until 15 or more piglets are born before starting split-suckling
- Never take piglets off the sow while she is still farrowing
- Organization is key: make two daily rounds each day — one early in the morning for litters born overnight and the second round for litters born during the day

### 2. Udder Training

The second option is udder training. The piglets are taught how to drink from the teats. Basically, hold piglets on the teats until suckling behavior is established. This must be done within 30 minutes after birth and if necessary, a second time 60 minutes after birth. Focus on piglets that weigh between 2 and 3 pounds at birth. It is important that the interval between birth and udder training is as short as possible.

### Some tips:

- Mark piglets as they are born
- Choose the proper teat
- Execute udder training within 30 minutes after farrowing
- If necessary, repeat at 60 minutes after birth
- The goal is to have piglets drinking colostrum milk on their own after the intervention

### 3. Colostrum manual collection and administration

The third option for colostrum management is manual collection and administration. It is a method that requires more manual work than the other two options. In practice, this process currently requires too much time and effort to likely increase dramatically in use. Therefore, this option is limited to farms with a lower number of sows per full-time equivalent employee. For this method to be successful, it is important to identify the right sow and piglets to be collected and administered, respectively.

For colostrum collection, choose sows that are in parity 3 to 5. The best teats to collect are the first three pairs of teats. Avoid small ones. Collect the colostrum 1 to 3 hours after the first piglets are born. Collect for 30 minutes after an injection of oxytocin (use only under appropriate local health and management standards). Take a good look at the teats: a good quality teat is long, has good mammary gland development and wide teat space. A medium quality teat has short teats, but with good mammary gland development.

The next key is to select the piglet(s) that will be provided colostrum. The most important ones are those that are chilled and/or have empty bellies. Another option is to identify piglets that were born between 2 and 3 pounds, but are struggling to get started. Although colostrum can be provided for up to 24 hours after birth, it is preferable to be provided within the first six hours.

When providing colostrum, the type of nipple used can greatly impact the desire of the piglet to express suckling behavior. The right size, hole and softness is important. Delivery will take 1 minute and 40 seconds for one delivery of 30 cc. The volume should be about 30 cc per pig, per time. If the piglet is small, provide the most you can up to 30 cc without spilling colostrum; piglet suckling behavior will be a key for successful delivery of the targeted quantity. From our experience, there are practical limitations when providing more than 30 cc for the piglets as they will show reduced suckling behavior and tend to get lethargic.

### Some tips:

- During collection, use a bottle with a wide cone to avoid spilling of colostrum
- Do not waste time on sows not producing enough colostrum to collect
- Consider 15 to 20 sows to collect 1 liter (1,000 cc) or 1 quart of gallon of colostrum
- Consider 1 hour to collect 1 liter or 1 quart of gallon of colostrum
- Collection will usually take 2 minutes for 30 cc

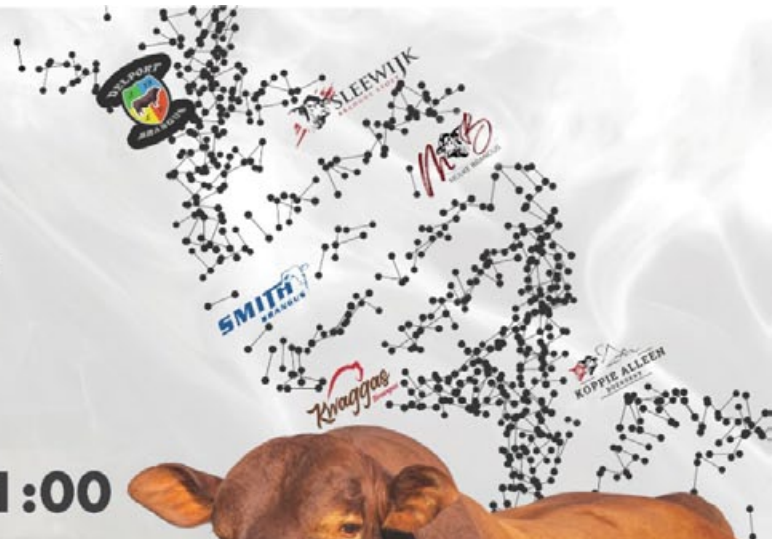

Gonzalez continues: “Proper colostrum management makes it possible for every pig producer to improve their biologic and economic results. Remember that PIC Technical Services staff are available to help you with these or any other topics related to management, farm flow, stocking density and other important husbandry factors.”

Together we can maximize the long-term health and productivity of your herd. Our future – and yours – has never looked so bright, as PIC continues to deliver on our promise to Never Stop Improving.

# Speenkalf Pryse, Goeie nuus, lees meer...

## Speenkalf pryse – Gauteng, Noordwes en Vrystaat

### Speenkalf pryse September 2024

Wonderlik, uitvoere styg. Ons het so baie gekerm en gekla maar dankie aan die gene wat so hard werk om hierdie reuse sukses te bewerkstellig.

Ons gaan nou nie hulle name herhaal nie. Baie geluk en ons hoop julle doen so voort.

Daar kan nog baie verbeter word. Help my reg in die kommentaar hier onder. Maar, ek verstaan dat ons voer miljoene se toerusting in vanaf China maar die vleis uitvoere na China is 'n ronde null.

Dus, sit die China mense ons politici ore aan. Waar is die Minister van Landbou?

Dan moet die voerkrale hul ekstras aanpas. R3 per kg is nie vir onthoringde beeste maar vir natuurlike poenas. Dit wil voorkom of voerkraal agente nie die verskil ken nie. Ons boer met vleis, nie bene nie.

Ons wil vleis uitvoer, nie bene nie.

### Speenkalf pryse Augustus 2024

Speenkalf pryse styg maar dit is maar eina eina. Vleispryse is goed met A2 en A3 op R60. C grade op R45.

### Speenkalf pryse Julie 2024

Die nuwe Minister word waardeer maar die vraag is: Kan hy uitvoere verbeter?

Julie is normaal weg die maand waar pryse begin styg. Vanjaar is geen uitsondering nie.

Mieliepryse is laag en dit bevoordeel die mark. Dit is veral mielie invoere wat die pryse in toom hou.

### Kudde verbetering:

Die voorkeur rasse in die voerkrale is Afrikaner, Brahman en die Bonsmara (Veral poena's). Die Afrikaner was verassend goed en wys op die teel verbeterings.

Lae vrektes, vinnige groei en goeie voer omset verhouding is die vernaamste voordele.

Ander rasse is die Simbra en Angus. Laaste groep was Limousin en Simmentaler. Die probleem hier is die lang tyd wat verloop om die diere op die maksimum ekonomiese faktore te voer. (Hierdie is volgens toets verslag ontvang)

Om dus op te som. Die bees ras met die beste vordering in die voerkraal maar ook met die minste bene is die Poena Bonsmara.

As jy dus jou kudde wil verbeter met alle faktore in ag geneem word die aanbeveling gemaak om 'n Poena Bonsmara bul onder jou kudde te sit.

Om die vleis te verbeter kan die Wagyu gekruis met die Poena Bonsmara ook oorweeg word. Baie min data in hierdie tiepe teling is egter beskikbaar.

Ons vra kenners in die verband se mening. Skryf aan [administrasie@stigting.co.za](mailto:administrasie@stigting.co.za)

### Vleis Voorkeure:

Poena beeste en Wagyu is beeste waarvan die vleis geneig raak om verkeur te geniet. Sommige voerkrale gee 'n premie per kg meer vir sulke beeste.

Poena beeste het 'n kleiner beenstruktuur. Ons verwys nie hier na beeste wat onthoring is nie want dit is nie poena beeste nie.

As jou uitslag persentasie beter is en die slagter/slaghuis wil minder verliese verkry weens minder bene is dit die voorkeur. Soms is die bene sommer ooglopend minder.

Wagyu se plaaslike verbruik is swak en dit is veral die bene wat hier die ras benadeel. As jy die "marble" kan inteel in 'n poena bees kan jy meer vleis kry. Dit sal ook die kwaliteit, sagtheid, menslike gesondheid en minder been verbeter.

Die gehardheid en siekte weerstand van veral bosluise sal die wagyu ras verbeter.

Gee jou mening vir kudde en inkomste verbetering as kommentaar onder toe.

### Speenkalf pryse vleispryse

Sonder BTW. Gemiddelde prys. Goeie Vleis beeste soos Bonsmara behaal beter pryse as die gemiddeld.

### Pryse per kg op die hoof: Gemid. Markwaarde Tans – Beste pryse

Slagpryse vir vet beeste is tans A graad R60/kg AB graad R57 en C graad R45

- Speenkalwers onder 200kg R34.00 – R36.00
- Speenkalwers 200 tot 280kg R32.50 – R34.00
- Speenkalwers bo 280kg R30,00 – R32.00 . .
- A graad R30.50 – R31,40
- B graad R22.80 – R23,00
- C0/C1 graad R18.50 – R21,00
- C2/C3 graad R22,50 – R23,50
- Bulle R22,50 – R 24,00

\* A2 en AB2 grade se karkas pryse bly goed en kan toegeskryf word aan inflasie waar voer en vervoer hoog bly.

### Skaap en Bok:

#### Gemiddeld – Beste

- Stoorlam R44.00 – R45.00
- Slaglam R40.75 – R41.50
- Maer ooie R32.00 – R33.50
- Vet ooie R34.00 – R36.00
- Boklam R44.00 – R46.00
- Bokooie R38.50 – R42.00

# Phibro Animal Health to acquire Zoetis medicated feed additive portfolio

**With this divestiture, Zoetis can focus its livestock investments in other solutions, including vaccine, biologic and genetic programs, and Phibro significantly expands product offering and revenue base.**

Zoetis Inc. and Phibro Animal Health Corporation have announced that they have entered into a definitive agreement where Phibro Animal Health will acquire Zoetis' medicated feed additive (MFA) product portfolio, certain water soluble products and related assets for \$350 million, subject to customary closing adjustments. This transaction is expected to be complete in the second half of calendar year 2024.

Both Zoetis and Phibro Animal Health have a longstanding commitment to the production animal health sector. The acquired product portfolio, which generated approximately \$400 million in revenue in 2023, is comprised of more than 37 product lines that are sold in approximately 80 countries. Also included in the agreement are six manufacturing sites, four in the U.S., one in Italy and one in China. More than 300 Zoetis colleagues who support manufacturing, distribution and commercial activities are expected to transition to Phibro Animal Health, the companies said.

In terms of a species mix, Phibro will expand its footprint in poultry, beef and swine markets. From a geographic standpoint, the U.S. vs non-U.S. market percentage will stay about the same for Phibro at around 58-59% being U.S. based.

The manufacturing facilities that are included in the deal include Chicago Heights, Ill.; Willow Island, W.Va.; Eagle Grove, Iowa; Salisbury, Md.; Suzhou, China, and Medolla, Italy.

This transaction demonstrates Zoetis' disciplined capital allocation strategy to focus its investments on solutions for animal health, productivity and sustainability. With this divestiture, Zoetis can focus its livestock investments in other solutions, including vaccine, biologic and genetic programs.

"We remain committed to providing innovative solutions to our livestock customers," said Kristin Peck, Chief Executive Officer of Zoetis. "We believe that the long-term value of the transferred portfolio will be fully realized with Phibro Animal Health which will continue to expand its reach given their strong relationships with customers worldwide."

Zoetis' portfolio of MFA and water-soluble products across cattle, swine and poultry will complement and expand Phibro Animal Health's species and product portfolios, helping customers in the areas of animal care, disease prevention and enhanced nutrition. On a combined basis for the acquisition, Phibro Animal Health sales in the last 12 months would have been approximately \$1.4 billion. The portfolio is expected to boost

Phibro Animal Health's profitability and EBITDA margin and be accretive to its Adjusted Earnings Per Share. The acquisition is expected to be funded primarily with debt, and Phibro Animal Health has received financing commitments from a number of key relationship banks. Phibro Animal Health expects to have net leverage of 3.5-4.0x Debt / Adjusted EBITDA at close and will target net leverage of below 3.0x by its fiscal year end June 30, 2027.

"Over a long period of time, Zoetis has built a valuable, high-quality and reliable source of medicated feed additives around the globe," said Jack C. Bendheim, Chairman, President and Chief Executive Officer of Phibro Animal

Health. "This investment will enhance, diversify and broaden our portfolio globally and help us continue to deliver value to our customers and to our shareholders. We believe our cash generation will allow for continued investment into our higher growth businesses of Nutritional Specialties, Companion Animal, and Vaccines. I am confident we have the right capabilities to integrate and strengthen this business. I look forward to collaborating with the Zoetis team and welcoming new colleagues to Phibro Animal Health to support this portfolio."

Zoetis and Phibro Animal Health will work closely with their colleagues and customers to ensure a smooth transition and continued supply of these important products.

Guggenheim Securities, LLC is acting as exclusive financial advisor to Zoetis and Wachtell, Lipton, Rosen & Katz is acting as legal advisor. Citi is acting as exclusive financial advisor to Phibro and Kirkland & Ellis LLP is acting as legal advisor.

# Kuilvoer jou bate in tye van droogte

*Deur Henri Viljoen AFGRI Veevoere*

**Weens onvoorspelbare reën, droogte, mark skommeling a.g.v. Covid 19, verhoogde insetkoste en die grondkwessie het boere baie struikelblokke wat voorlê. Dit is ook opvallend ons laat reën kry die laaste paar jaar, veral in die sentrale deel van die land.**

Met hoë temperature en min weidings beskikbaar vanweë die lang harde winter is daar beperkte ruvoer op die veld beskikbaar vanaf Augustus tot en met Desember of selfs later wanneer dit vir die eerste keer reën. Kuilvoer is die beste en koste effektiefste manier om die laat reën periode te oorbrug.

## **Kuilvoer kostes en beplanning.**

Sorghum kuilvoer kan maklik op droëland verbou word en met sy lae insetkoste verlaag dit die risiko aansienlik. Met persoonlike ondervindings is beleef dat insetkoste selfs in 'n droë jaar gedek word vanweë die gewas se groei vermoë en hoë stand. In die Sentrale streke is die droëland koste tussen R300 – R450 per ton kuilvoer, afhangend van die volume kuilvoer wat geproduseer word. Natuurlik is die ou gesegde van hoe meer jy produseer, hoe laer is jou kostes hier ook waar.

Indien jy oorweeg om die seisoen kuilvoer te produseer moet daar nou al begin beplan word hoe dit in jou boerdery gaan inpas.

**Faktore wat in ag geneem moet word sluit in:**

## **Gewas en kultivar:**

Sorghum is baie goedkoper as mielies, maar die styselvlakke is baie laer. Grasse, lusern, beet en hawer kan ook ingekuul word.

## **Plant datum:**

Onthou die droë materiaal inhoud van kuilvoer moet tussen 32 – 45 % wees om te verseker jy kry goeie kompaksie en 'n suurstof vrye omgewing.

## **Kerf datum:**

Die datum is moeilik om te bepaal, maar is krities belangrik aangesien die stadium van sny direk gekorreleer kan word met die kwaliteit van jou kuilvoer. Kry kenners om jou te adviseer oor die sny stadium.

## **Toerusting tot jou beskikking en toerusting wat in gehuur of aangekoop moet word:**

Die inkuiling proses is baie tyd sensitief. Kontrakteurs is duur en nie altyd beskikbaar nie. Maak dus seker jy het genoegsame toerusting of huur opsies voor kuilvoer gemaak word.

### Waar die kuilvoer gestoor word:

Poog om die kuilvoer so naby as moontlik aan waar die diere gevoer gaan word te stoor, om sodoende die kostes laag te hou.

Maak seker die hoop is op 'n hoogliggende gebied sodat vloed water nie die voer beïnvloed nie.

### Metode van gestoor :

- Silo.
- Kuilvoer sak.
- Bunker.
- Gat met grond mure.
- Hoop bo op die grond (Bun)

Die bun metode van kuilvoer stoor is die maklikste en koste effektiefste manier om dit te doen. Dit is een van die grootste redes hoekom kuilvoer produksie deesdae baie makliker is as voorheen. Al wat benodig word is grond met 'n klein helling wat in 'n hoog liggende gebied geleë is en 'n goeie seil om die bun toe te maak na die vastrap proses.

### Inkuiling van die voer:

Die inkuiling is die belangrikste stap van die hele kuilvoerproduksie proses. Gedurende die inkuiling word die plant suiker omgeskakel in melksuur wat dien dan as 'n preserveermiddel. Inkuiling is 'n fermentasie proses wat in 'n anaërobiese omgewing plaasvind en vir die rede moet die kuilvoer hoop lugdig geseël word met 'n UV bestande seil wat ten minste 150 mikron dik is. Die optimale pH van goeie kuilvoer is tussen 3.8 – 4. Genoegsame suiker en melksuur bakterieë is nodig om te verseker dat die pH die beoogde vlakke bereik. Indien die pH nie onder 4 daal nie

sal bottersuur gevorm word wat die smaaklikheid van die kuilvoer kan beïnvloed wat lei tot laer innames en laer produksie.

### Kompaksie:

Maak seker die trekker wat gebruik word vir kompaksie trap nie onnodige grond of ander materiaal in die hoop nie. Kontaminasie vind plaasvind en die kuilvoer kwaliteit word negatief beïnvloed vanweë mikotoksiene wat oorgedra word. Kompaksie is 'n voortdurende proses tydens kuilvoer produksie, maak dus seker om baie aandag te gee hier aan.

### Hoeveel kuilvoer gaan gebruik word per dag:

Die hoeveelheid voer wat gebruik word per dag bepaal hoe groot die kuilvoer hoop gaan wees. Verliese word sodoende beperk.

### Toemaak van die hoop:

Ou bande of 'n grondlaag is die beste manier om die hoop toe te maak na die seil oorgetrek is vir wind. Maak seker om diere weg te hou van die kuilvoer hoop af.

Kuilvoer kan vir langtermyn gestoor word. Daar is gevalle aangeteken waar kuilvoer wat 20 jaar oud is suksesvol gebruik was om droogtes te oorbrug. Natuurlik was die kuilvoer goed gestoor in 'n suurstof vrye omgewing. Daar word voorspel dat die volgende paar jaar bestendige reënval seisoene gaan wees en dit is nou die geleentheid vir elke boer om voor te berei vir die moeiliker tye wat kan voorlê. Wanneer daar weer 'n droogte kom, sal jy as kuilvoer boer makliker die droogte kan aanpak.

# TAILBITING:

## Reflections of a multi-factorial problem

By Fred Bechaz (Pr.Sci.Nat; Feedtek)

**Swine production is a very intensive and complex system, with different and dynamic sections. Each section needs to be managed to run smoothly for overall efficiency and profitability. If something goes wrong, it can affect the profitability of the whole farming enterprise. One such challenge is tail biting.**

Tail and ear biting is a multi-factorial problem. It is usually a combination of unfavourable conditions, which results in pigs biting each other. The most obvious reason is that pigs that are unhappy or under stress will eventually show inclinations to bite each other. There are different places where pigs will bite and these are usually the tails, then ears and then also what is called flank-biting.

When biting does occur, it is important to try and find the main cause or trigger, so that this can be fixed to prevent future biting occurring in a specific house or age period. Where to start looking for the problem is always a good question, but a multi-faceted approach is needed.

**The following aspects need to be assessed:**

### Environment

- Ventilation – is it too cold or too hot?
- Airflow within the house and presence of pockets of ammonia?
- Is there enough space in the pen for the number of pigs?
- Is there enough feeder space per unit of time?

- Are there enough water drinkers available?
- Placement of feeders and drinkers.

### Health

- What is the disease status of the farm?
- Are the pigs being vaccinated and was this done correctly?
- What disease signs are being observed within a biting group of pigs?
- Sick pigs are unhappy pigs, leading to the occurrence of biting.

### Nutrition

- Is the diet balanced correctly according to the nutritional requirements of the animal?
- Is the feed being mixed correctly and the appropriate vitamin-mineral premix included in the diet?
- Are any of the ingredients being used in the feed of poor quality? For example, was a batch of soya oilcake meal received either over- or under-processed?
- Are there mycotoxins present in the feed and if so, which mycotoxins and at what levels?

- Is feed always available, or do “out-of-feed” events occur, especially during the night?
- Is there mouldy or stale/sour wet feed in the feeders?
- Is the quality and freshness of the water acceptable?
- If drinker bowls are being used, are they clean and free of faeces?

### What can be done to decrease the incidence of tail, ear and flank biting?

- It is important to quickly find the main cause and rectify it for long-term improvements.
- Many products can be used as a “patch/plaster” to decrease the incidence.
- In-feed additives, which reduce the stress on the animals, can help.
- Toys, chains, empty bags or empty plastic containers can be added to the pigs’ pens, to get them to play/chew and thus decrease physical biting.
- With many of these in-feed products or toys, it is important to start using them before the pigs start to bite. Once they start to bite, the addition of such toys and in-feed additives have limited success.

### Treatment of affected pigs:

- Attend to and treat the pigs that are bitten as soon as possible.
- If possible, remove the bitten pigs out of the group as quickly as possible, to decrease further biting incidence.
- Consult your veterinarian for treatment protocols and medications.
- There are different types of ointments that can be applied onto the bitten areas. Find the right one for your circumstances.
- If tail biting is left untreated it could lead to infection in the spinal cord, resulting in lameness and also pigs being condemned on the slaughter line.
- The quicker it is treated, the less financial losses could be expected.

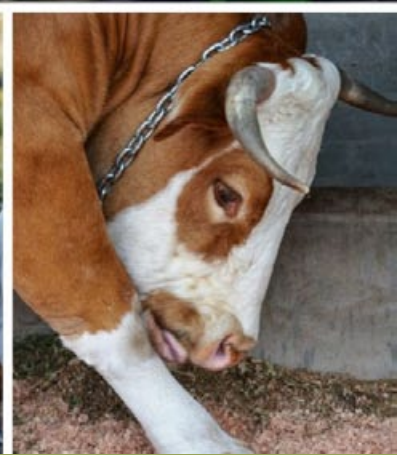

It is important to follow a holistic approach on-farm, with a very good communication system between farm manager, veterinarian, nutritionist and genetic supplier. When they work together as a team the efficiency and on-farm profitability can be increased.

Visit [www.agrifarmacysa.co.za](http://www.agrifarmacysa.co.za) for more information on tail biting and contact the author on 082 821 5991 or send an email to [fred@feedtek.co.za](mailto:fred@feedtek.co.za). For more information on home-mixing of pig feeds, visit [www.feedtek.co.za](http://www.feedtek.co.za).

## 15 Things You Probably Didn't Know About Agriculture

The agriculture sector is one of the largest in the world. The world's total population is expected to reach 9.9 billion by 2050. This rapid increase in population is boosting the demand for agriculture to cater for the increased demand. The agriculture industry is filled with amazing facts. Let's tell you just some of them.

### 2. Nearly Everything We Eat and Wear is A Product of Agriculture

Look around you and you will find that almost everything you eat or wear comes from the crops and livestock raised on farms; hence are a product of the ever-growing agricultural industry. The list of products is just too long to list, ranging from cotton and wool to all kinds of fruits and vegetables.

# BOERhier VEILINGS

Spreuke 16:9

'n mens beplan sy pad, maar die Here bepaal hoe hy loop.'

- Die lewe draai nie altyd uit soos ons gehoop en beplan het nie.
- Ons word dikwels met onverwagte kwessies langs die pad gekonfronteer.
- Slegs God weet werklik wat die toekoms inhou.
- In hierdie onsekerheid het ons die belofte dat HY ons treë sal rig.

Gebed: Vader, dank U dat U by elke draai in die lewenspad daar is om my te lei en te wys watter rigting om te gaan. Ek bid dat die planne in my hart in lyn sal wees met die treë wat U vir my beplan het. Amen.

*Lizelle*

Dankie dat jy lekker saamgelees het! Stuur hierdie e-tydskrif aan na jou kontakte toe sodat hulle ook deel kan wees van ons familie!
